“ Our new building looks very modern after been designed and installed with OPPLE LED products. I am so proud to tell all my light products are made in China. Our staff is also very happy to work in such a well-lit environment!'-General Manager of New Hope South Africa ”

Customer Voice

## Introduction

When the New Hope Group, one of the largest agribusiness operators in China, opened their new administrative office in Cape Town, South Africa they were looking for a sustainable and comfortable lighting solution.

## The Lighting Challenge

Lighting is a huge component of what defines the functionality and ambiance of any given space. The New Hope Administrative Office needed a lighting design that illuminated each part of the building in a way that was appropriate for its intended purpose. The conference room, balcony, dining room, and office all required lighting suited for the activities that would take place in them.

## Benefits

OPPLE provided a thorough, customized lighting design that allows New Hope to get the most out of every room in its office. OPPLE products are flicker free, providing comfortable, stress free lighting for working environments. Yang Zhao stated, "The LEDs are good looking as well as saving energy. We are more than satisfied with the OPPLE solution." LED saves up to 60% energy, has a much longer lifespan, and requires low maintenance cost compared to conventional lights. This is a total package that results in lower costs and improved visual comfort.
